TITLE: Survey of modern designs of transistorized FM radio receivers

SOURCE: Przeglad elektrotechniczny, no. 1, 1965, 17-22

TOPIC TAGS: FM receiver, transistorized circuit

ABSTRACT: The article gives a description of the circuitry and the operating characteristics of four radio receiver set models. Three of them are of the AM/FM type, namely the "Coupe" by Philips Co., the automobile receiver by RCA and the automobile receiver by Amperex Electronic Corp; the fourth model is a UHF FM receiver by Texas Instruments. The common features of all these transistorized models are discussed and their differences are pointed out. The use of mesa transistors for the UHF component is mentioned. The UHF tuner consists usually of two stages, sometimes of three stages. In most European models all input stages are untuned and matched for passing a wide band, while most American have all three stages tuned: input, output and the heterodyne circuit. Orig. art. has: 4 figures. [JFRS]

"Psychoneuroses."

Warsaw, Postepy Higieny i Medycyny Doswiadczonej, Vol 17,  
No 3, 63, pp 305-345.

Abstract: Author discusses the diagnostic elements of neuroses and psychoneuroses, their classification, and distinction from psychopathies and psychoses; the psychosomatic correlation involving the cerebral cortex and subcortical centers, the autonomous nervous system, and endocrine glands; the theories covering them, involving disturbance of nerve impulses and sense of reality, internal conflicts, suppression, and asocial compensation for inferiority complex; as well as connection with personality development, the role of disintegration, infantilism, polarity, or positive mental development. There are 17 references, of which 7 are Polish (including Pavlov), three are German, and the other Western.

Dąbrowski, M. Foundation Concepts for Planning the Biological Conversion of River and Mountain Stream Basins.

"Podstawy projektowania biologicznej zabudowy zlewni rzek i potoków górskich". Gospodarka Wodna. No. 12, 1954, pp. 472-475.

The aim of biological conversion of river basins and biological river and mountain stream control is to lead water off harmlessly by utilizing trees and shrubbery. Denuding processes in river and stream basins are discussed, as also their detrimental effect on the water economy of mountain regions. General principles are given for the biological conversion of slips and slides, and are systematized latter. A list of trees and shrubs is given, which can be used for biological conversion. A description is included of the fundamentals for planning biological regulation of rivers and mountain streams, with special emphasis on profiling the flow.

TITLE: Investigation of edge effect on a convex double-curvature shell, using models

PERIODICAL: Referativnyy zhurnal, Mekhanika, no. 3, 1963, 11, abstract 3V67 (Inż.-ia i budown. 1962, v. 19, no. 4, 125-128 (Pol.; summaries in Rus. and Eng.))

TEXT: The author investigated translational shells whose middle surface was an elliptic paraboloid. A short description of the theory is given. The experiments dealt with the domain of action of edge effects under the following conditions: presence of arches at the edges with fixed or movable supports in the corners; support by vertical diaphragms; fixed corners without reinforcement of edges. [Abstracter's note: Complete translation.]

TITLE: Photographing for determining ballistic elements in experimental flights of controlled missiles and rockets

PERIODICAL: Referativnyy zhurnal, Astronomiya i Geodeziya, no. 10, 1962, 74,  
abstract 10A552 ("Przegl. geod.", 1962, v. 34, no. 2, 68 - 70,  
Polish)

TEXT: Instruments used in photographing controlled missiles and rockets are briefly described: Wild ballistic phototheodolite, Askania narrow-film kinoteodolite (3 - 20 photographs in 1 sec), Bowen Ribbon-type American photo-cameras (30 - 180 photographs in 1 sec) and chronographic camera ( 30 - 120 photographs in 1 sec). A method of "double projection" employed at the California research center is mentioned: two cameras, one for photographing on the color film and the other for photographing on the conventional panchromatic one were mounted at the ends of a base with the known geodetic coordinates. The cameras were switched on automatically by a radio signal from the site of rocket

launching. The photographs were processed on setting devices. The photogrammetric method of determining ballistic elements of controlled missiles and rockets proved to be more precise in comparison with the results obtained by radiotechnical means.

Structures

1954 Nowacki, W., and Dabrowski, R. - Some methods of calculation and construction theory - Metody obliczen i konstrukcji teorii obliczen i konstrukcji. (Ed. by J. G. Kowalewski, Warsaw, Państwowe Wydawnictwo Techniczne) [Rozdz. 10].

Book contains an extensive and informative treatment of four parts: I - Calculation of the strength of beam structures according to the method of Janusz Arty, II - Theory of beams with a critical examination of these methods, III - Statical equivalence of rectangular and spherical shells, including the theory of bending of the cylindrical shell with variable and non-uniform thickness. The calculation of the strength of cylindrical shells (plate girders) and foundations. IV - Critical examination of some theories of strength of structures. Several appendices describe various types of structural elements. In the book authors have the latest available information in the calculations and construction of plates and shells of available world literature. The work contains unique theoretical publications of the Polish construction literature.

TOPIC TAGS: polycondensation, hydroquinone, carboxylic acid anhydride

ABSTRACT: Eighteen products of polycondensation of hydroquinone and of its dimethyl ether with some polycarboxylic acids anhydrides were prepared, unknown to the literature, and their electric, magnetic and chemical properties were comparatively studied. Orig. art. has: 3 figures, 1 formula and 3 tables. [Based on authors' Eng. abst.] [JPRS: 36,002]

Dabrowski S. Characteristic Curve of  
Centrifugal Compressors as a Function of the  
Number of Compressor Stages.

Wplyw ilosci stepni sprezarski odsrodkowej na  
kazhelt jej charekterystyki. Przeglad Mechaniczny,  
No. 6, 1952, pp. 248-251, No. 12, 1952, pp. 527-531,  
18 figs.

The author provides, on the basis of single-stage  
compressor characteristics, a graphic method of  
characteristic curve design for multistage compressors,  
and deals with the conclusions drawn from the  
characteristics so obtained. Experiments carried  
out at Gdansk Polytechnic Water Turbine Laboratory  
gave the following results. Records taken of a  
three-stage radial compressor were intended, first  
and foremost, to check the conclusions previously  
advancod as to the functional influence of the  
number of stages in centrifugal compressors on its  
characteristic curve. The experiments confirmed the  
fact that the compressor characteristic curve becomes  
steeper as the number of stages increases, that is to  
say—that V<sub>max</sub> moves towards lower, and the peaking  
point towards higher efficiencies. The last p

"Development of Modern Medicine in Hungary."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 19-20, 6-13  
May 63, pp 654-658.

Abstract: At the time when modern medicine was developing in Europe, Hungary was enchain under the despotic rule of the Austrian empire, and the physicians who tried to bring it to Hungary were greatly restricted. The author gives a chronological listing of these physician-patriots, along with their contributions, which had to await the liberation of democratic Hungary to achieve their full realization. There are no references.
